- Material: 100% cotton

PE Tape

RF-MD016

Pos. 1-16

DESCRIPTION :

- Model: simplified packing, spool blister packing, plastic can, cutting device.
- Size: 1,25cm x 5y| 2,5cm x 5y| 5cm x 5y| 7,5cm x 5y| 10cm x 5y|
- Material: It's made of PE film and zinc oxide colloid.

DETAILS:

- Provide a clean and easy bilateral tear.
- Conform to skin and flex with the body for comfort.
- Hypoallergenic and latex-free.

APPLICATIONS:

A breathable perforated plastic tape that permits skin examination without tape removal. Used for facial dressing, also for tubes, lines and I.V. catheters.

RF-MD017

Silk Tape

DESCRIPTION :

- Model: simplified packing, plastic can.
- Size: 1,25cm x 5y| 2,5cm x 5y| 5cm x 5y| 7,5cm x 5y| 10cm x 5y|
- Material: It's made of silk-cloth and zinc oxide colloid.

DETAILS:

- Strong woven rayon/acetate backing provides high tensile strength for confident securement of dressings and devices.
- Waterproof and easy to tear
- Hypoallergenic and latex-free.

APPLICATIONS:

Ideal for bulky dressings that require high conformability, also for post-operative surgical dressings.

Pos. 1-17

Non-woven Tape

RF-MD018

Pos. 1-18

DESCRIPTION :

- Model: simplified packing, spool blister packing, plastic can, cutting device.
- Size: 1,25cm x 5y | 2,5cm x 5y | 5cm x 5y | 7,5cm x 5y | 10cm x 5y |
- Material: It's made of silk-cloth and zinc oxide colloid.

DETAILS:

- Flexible and comfortable, hypoallergenic.
- Adheres well to damp skin. Latex-free.

LABORATOR AND SURGERY ROOM EQUIPMENT

Tubes

RF-TU001

Pos. 17-1

Plain Tube without Additive

It is used for collecting and storing blood specimen for biochemistry, immunology and serology tests in medical inspection and applicable for all mainstream biochemical analyzers. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

RF-TU002

Plain Tube with Clot Activator

It is coated with clot activator on the inner around of the tubes. It is used for collecting blood specimen for biochemistry and immunology tests, especially fast in blood coagulation. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-2

SSGT Tube

RF-TU003

SSGT tube stands to Clot Activator with Gel Tube. It is coated with activator and inside the tube a barrier Gel presented at the bottom. It is used for clinical biochemistry and immunology. The obvious characteristic of SSGT tube is used to obtain high-quality plasma specimen for medical laboratories. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-3

Sodium Heparin Tube

It is coated with Sodium Heparin. It is used for collecting blood specimen for biochemistry tests and some test items in blood rheology. The anticoagulant heparin activates antithrombins, thus blocking the coagulation cascade and producing a whole blood/plasma sample instead of clotted blood plus serum. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

RF-TU004

Pos. 17-4

RF-TU005

Pos. 17-5

Lithium Heparin Tube

It is coated with Lithium Heparin. It is used for collecting blood specimen for biochemistry tests and some test items in blood rheology. The anticoagulant heparin activates antithrombins, thus blocking the coagulation cascade and producing a whole blood/plasma sample instead of clotted blood plus serum. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

PSGT Tube

RF-TU006

PSGT tube stands to lithium heparin with gel tube, it is coated with lithium heparin, and the inert separation gel is at bottom of heparin tube. Through centrifugation, the separation gel can form a barrier between plasma and blood cell and prevent substance exchange. Plasma specimen obtained is the best choice for electrolyte test and plasma analysis in routine biochemistry and any emergent biochemistry. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-6

RF-TU007

EDTAK2 Tube

It is coated with EDTAK2. It is widely used in clinical haematology and various kinds of blood cell test instrument. Furthermore, EDTAK2 tube can be used in direct sampling analyzers without actually been opened. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-7

RF-TU008

EPGT Tube

EPGT tube stands to EDTAK2 with gel tube. It is coated with EDTAK2, and the inert separation gel is at the bottom of EDTA tube. Through centrifugation, the separation gel can form a barrier between plasma and blood cell and totally separate them. Clinical specimen obtained is suitable for analysis of virus capacity and molecular diagnostics of undiluted plasma. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-8

RF-TU009

EDTAK3 Tube

It is coated with EDTAK3. It is widely used in clinical haematology and various kind of blood cell test instrument. Furthermore, EDTAK3 tube can be used in direct sampling analysers without actually being opened. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-9

Glucose Tube

The additive of glucose tube is sodium fluoride/potassium oxalate or EDTA/sodium fluoride. It is used for collecting blood specimen and anticoagulation for the analyses such as blood sugar, sugar water, sugar tolerance and anti-alkali haemoglobin. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-10

RF-TU011

Coagulation Tube

It is filled with buffered tri-sodium citrate solution and citrate concentrations of either 0.109mol/L (3.2%) or 0.129mol/L (3.8%) are available. It is mainly used for the test of blood coagulation mechanism and it can provide an excellent condition for the test of PT, APTT VALUES. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

Pos. 17-11

RF-TU012

ESR Tube

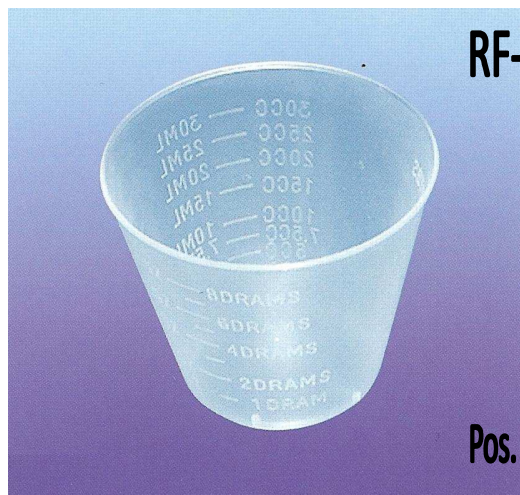

It contains a 3.8% buffered tri-sodium citrate solution (0.129mol/L) with the mixing ratio of one part citrate solution to four parts blood. It is used for collection blood and anticoagulation for sedimentation rate test. They are normally made of glass and plastic. In addition, the plastic tube includes PET, PP and PS.

ELECTROMEDICAL PRODUCTS

Infrared Ear Thermometer

RF-IT001

Ear thermometer with probe cover
 Temperature reading in °C and °F
 25 memory for recall
 With fever alarm
 With countdown timer to reminder to take medication
 With built in pill box for medicine storage
 With built in storage for thermometer
 Ideal for Travel

Pos. 20-1

Ultrasonic (mesh) Nebulizer

RF-NB001

Small portable size for easy travel
 Minimal Noise for comfort use
 Vapor size: Average 3,8 μm
 Vapor rate: 0,4 ml/minute
 Medicine container: 8cc
 Operation power: 4 pcs AA Alkaline Battery or Adaptor plug
 Battery power efficiency: 120 minutes on DC 6V
 Unit size: 4,5 x 5,7 x 13,6 cm
 Unit weight: 230 g

Pos. 21-1

Digital Thermometer

RF-DT001

10 seconds measurement
Beep to start

Pos. 23-4

Nose compressor nebulizer

RF-CN005

Hay fever or allergic rhinitis symptoms are running nose, sneezing, congestion or teary eyes.

Uses low energy narrow-band light to reduce inflammation of nasal mucous membrane and provide relief for hay fever sufferers.

Non-invasive, clinically tested.

Treatment cycle: approx 3 minutes, at least 2 – 3 days a day.

Built-in timer for auto shut off.

Power: 1 pc battery of 9 volt

Unit size: 5 x 4,5 x 7,8 cm

Packing: 24 pcs/5kgs/1cuft

Pos. 24-1

Forehead Thermometer

RF-FT001

Temperature reading in °C and °F

Fever alarm
